the world today is overwhelmed by wars between nations and within nations
wars that have dominated american politics for quite some time point of
attack calls for a new understanding of the grounds for war in this book

John Yoo argues that the new threats to international security come not from war between the great powers but from the internal collapse of states, terrorist groups, the spread of weapons of mass destruction, and destabilizing regional powers in point of attack. He rejects the widely accepted framework built on the UN Charter and replaces it with a new system consisting of defensive, pre-emptive, or preventive measures to encourage wars that advance global welfare. Yoo concludes with an analysis of the Afghanistan and Iraq wars, failed states, and the current challenges posed by Libya, Syria, North Korea, and Iran.

The World Development Report 1998/1999, now in its twenty-first edition, focuses on the role of knowledge and information as a factor of development, including the important trade-offs in strategies and policies and many other challenges. It examines such important questions as why have some developing countries been able to exploit the rapidly increasing stock of global knowledge more than others, and what can be done to help those falling behind. The report also looks at the challenge of finding the balance between private initiative and public intervention that encourages innovation and manages attendant risks. It deals with the role of international assistance and international organizations which can help develop understanding about these complex processes, help to transfer lessons of development experience across countries, and help finance crucial knowledge investments of importance to developing countries. Known as the standard reference for international economic data, the World Development Report 1998/1999 provides a set of selected world development indicators as an appendix presenting social and economic statistics for more than 200 countries.

The central Gujarat region of western India is home to the entrepreneurial landowning Patel caste who have leveraged their rural dominance to become a powerful global diaspora of merchants, industrialists, and professionals. Investigating the Patels' intriguing ascent, Vinay Gidwani analyzes its broad implications for the nature of labor and capital worldwide with the Patels as his central case. Gidwani interrogates established concepts of value, development, and the relationship between capital and history. Capitalism, he argues, is not a frame of economic organization based on the smooth, consistent operation of a series of laws but rather an assemblage of contingent and interrupted logics stitched together into the appearance of a *deus ex machina*. Following this line of thinking, Gidwani points to ways in which political economy might be freed of its lingering Eurocentrism, raises questions about the adequacy of postcolonial studies, critiques of Marx and capitalism, and opens the possibility of situating capitalism as a geographically uneven social formation in which different normative or value-creating practices are

imperfectly sutured together in ways that can equally impair and enable profit and accumulation both theoretically astute and empirically informed capital interrupted unsettles encrusted understandings of staple concepts within the human sciences such as hegemony governmentality caste and agency and ultimately does nothing less than rethink the very constitution of capitalism vinay gidwani is associate professor of geography and global studies at the university of minnesota

important parts of development practice especially in key institutions such as the world bank are dominated by economists in contrast development studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles hence a tension has arisen between the claims made by development economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by development studies the aim of this book is to show how the two disciplines have interacted as well as how they differ this is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries this book introduces development economics to those coming from two different but linked perspectives economists and students of development who are not economists in both explaining and critiquing development economics the book is able to suggest the implications of these findings for development studies and more broadly for development policy and its outcomes

the routledge handbook of comparative political institutions hcpi is designed to serve as a comprehensive reference guide to our accumulated knowledge and the cutting edge of scholarship about political institutions in the comparative context it differs from existing handbooks in that it focuses squarely on institutions but also discusses how they intersect with the study of mass behaviour and explain important outcomes drawing on the perspective of comparative politics the handbook is organized into three sections the first section consisting of six chapters is organized around broad theoretical and empirical challenges affecting the study of institutions it highlights the major issues that emerge among scholars defining measuring and analyzing institutions the second section includes fifteen chapters each of which handles a different substantive institution of importance in comparative politics this section covers traditional topics such as electoral rules and federalism as well as less conventional but equally important areas including authoritarian institutions labor market institutions and the military each chapter not only provides a summary of our current state of knowledge on the topic but also advances claims that emphasise the research frontier on the topic and that should encourage

greater investigation the final section encompassing seven chapters examines the relationship between institutions and a variety of important outcomes such as political violence economic performance and voting behavior the idea is to consider what features of the political sociological and economic world we understand better because of the scholarly attention to institutions featuring contributions from leading researchers in the field from the us uk europe and elsewhere this handbook will be of great interest to all students and scholars of political institutions political behaviour and comparative politics jennifer gandhi is associate professor department of political science emory university rubén ruiz rufino is lecturer in international politics department of political economy king's college london

deciding when and how to retire are among the most important decisions most people make can they be depended on to plan with foresight and make sound decisions according to standard economic analysis the answer is a qualified yes but studies by psychologists sociologists and economists themselves raise doubts about this comforting appraisal this volume by analysts trained in economics and other disciplines suggests that retirement planning and decisions fall far short of the rational ideal gary burtless explains what economic research has to say about retirement behavior annamaria lusardi reports that many people in their fifties and older say they have not even thought about retirement matthey rabin and ted o donoghue show that procrastination can cause huge economic losses robert axtell and joshua epstein show that herd behavior explains observed patterns of retirement behavior better than does the assumption of rational decisionmaking george loewenstein drazen prelec and roberto weber report that many people incorrectly anticipate what retirement will be like and rationalize whatever decision they have made david fetherstonhaugh and lee ross report experimental evidence that the effect of social security provisions may depend on how these policies are framed as well as on the specific content of those policies these and other authors also explore the broader implications of these behavioral patterns copublished with russell sage foundation
