this work first published in 1985 is an analysis of the syntax of the albanian verb complex the term verb complex is defined here as the verb stem and its conjugational endings together with the perfect auxiliaries and verb clitics in a wider sense the verb includes the verb and its central arguments subject direct object and indirect object the analysis is presented in a somewhat expanded version of the relational grammar framework of perlmutter and postal 1977 it is argued that by assuming the existence of multiple levels in the syntactic structure of a clause it is possible to account for the distribution of active and non active verb forms over the various constructions of albanian with a single generalisation this title will be of interest to students of language and linguistics
